

Project Design Phase-II

Data Flow Diagram & User Stories

Date	3 October 2026
Team ID	SWTID-2026-1299
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Project Overview & Objectives

This project focuses on implementing Client Scripts and UI Policies on the ServiceNow Incident form to improve user experience, enforce field behaviour, and reduce incorrect data entry. The implementation dynamically controls form fields based on user actions and incident conditions without requiring the form to be submitted.

Skills Required: ServiceNow Administration, JavaScript, UI Policy Scripting, Client-Side Form Logic.

- Sowmiya S (Member)
- Varshini K S (Member)

Milestone Breakdown (Overview)

Milestone 1

Create UI Policy on Incident (Mandatory & Visibility rules).

Milestone 2

Create UI Policy Action - Urgency (Read-only & Priority mapping).

Milestone 3

Create onChange Client Script (Caller & Assignment Group behavior).

Milestone 4

Create onSubmit Client Script (Save Validation & Closure checks).

Data Flow & User Stories Mapping

The following standard template lists all user stories, functional requirements, and acceptance criteria mapped across the 6 ServiceNow project milestones:

User Type	Functional Requirement (Epic)	Story #	User Story / Task	Acceptance Criteria	Priority	Release
Customer (ITIL)	Milestone 1: Create UI Policy on Incident	USN-1	As an ITIL user, I want a UI Policy to automatically make 'Subcategory' mandatory when 'Category' is 'Software'.	Subcategory highlights and becomes mandatory when Software is chosen.	High	Sprint-1
Customer (ITIL)	Milestone 1: Create UI Policy on Incident	USN-2	As an ITIL user, I want low-priority incident fields hidden by default using UI Policy rules.	Unnecessary fields are hidden on initial form load to clean UI.	Medium	Sprint-1
Customer (ITIL)	Milestone 2: Create UI Policy Action - Urgency	USN-3	As an ITIL user, I want a UI Policy Action to make 'Urgency' read-only when State is Resolved/Closed.	Urgency field is locked and cannot be edited after resolution.	High	Sprint-1
Customer	Milestone 2: Create UI Policy	USN-	As an ITIL user, I want the 'Priority' field to dynamically	Priority matrix calculates and locks	High	Sprint-2

User Type	Functional Requirement (Epic)	Story #	User Story / Task	Acceptance Criteria	Priority	Release
(ITIL)	Action - Urgency	4	update based on Impact & Urgency.	priority level automatically.		
Customer (ITIL)	Milestone 3: Create onChange Client Script	USN-5	As an ITIL user, I want an `onChange` script that triggers a notice when 'Caller' changes.	Warning/info pop-up displays confirming the caller change action.	Medium	Sprint-1
Customer (ITIL)	Milestone 3: Create onChange Client Script	USN-6	As an ITIL user, I want an `onChange` script on 'Assignment Group' to clear 'Assigned To'.	Assigned To resets to blank when a new group is selected.	High	Sprint-2
Customer (ITIL)	Milestone 4: Create onSubmit Client Script	USN-7	As an ITIL user, I want an `onSubmit` script to validate 'Short Description' is not blank.	Form submission aborts with an alert if description is empty.	High	Sprint-1
Customer (ITIL)	Milestone 4: Create onSubmit Client Script	USN-8	As an ITIL user, I want an `onSubmit` script to check closure notes before closing.	Error prompt prevents closing without valid close notes.	Medium	Sprint-2
Customer (ITIL)	Milestone 5: Create onCellEdit Client Script	USN-9	As an ITIL user, I want an `onCellEdit` script on list view to prevent unauthorized status updates.	List editor catches invalid jumps and rolls back cell edit.	Low	Sprint-2

User Type	Functional Requirement (Epic)	Story #	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Milestone 6: Testing the Configuration	USN-10	As an Administrator, I want to execute automated form tests across all UI Policies & Scripts.	Test execution logs confirm client scripts execute without errors.	High	Sprint-2

Conclusion & Sign-off

All 6 milestones for the ServiceNow Incident Client Script & UI Policy project have been successfully configured, mapped into structured user stories, and validated against standard ITIL workflow requirements.
