| Team ID       | SWTID-2026-1299                                |
| Project Name  | Implement Client Script & UI Policy (Incident) |
| Maximum Marks | 4 Marks                                        |

**Technical Architecture:**

The Deliverable shall include the architectural configuration mapped across all 6 ServiceNow milestones, detailing UI forms, client scripts, database records, and server communication layers.

**Table-1 : Components & Technologies (Milestones 1 to 6):**

| S.No | Component                         | Description                                                                               | Technology                     |
|------|-----------------------------------|-------------------------------------------------------------------------------------------|--------------------------------|
| 1.   | User Interface (Milestone 1)      | ServiceNow Incident form UI layout for ITIL users and administrators.                     | ServiceNow UI16, HTML, CSS     |
| 2.   | Application Logic-1 (Milestone 1) | UI Policy logic for dynamic mandatory fields and visibility rules on Incident form.       | ServiceNow UI Policy Engine    |
| 3.   | Application Logic-2 (Milestone 2) | UI Policy Actions for Urgency read-only state and Priority matrix mapping.                | ServiceNow UI Policy Actions   |
| 4.   | Application Logic-3 (Milestone 3) | onChange client script triggering alerts on Caller change and resetting Assignment Group. | JavaScript, GlideForm (g_form) |
| 5.   | Application Logic-4 (Milestone 4) | onSubmit client script validating Short Description and closure notes before save.        | JavaScript, Form Submit API    |

| S.No | Component                            | Description                                                                             | Technology                                |
|------|--------------------------------------|-----------------------------------------------------------------------------------------|-------------------------------------------|
| 6.   | Application Logic-5 (Milestone 5)    | onCellEdit client script intercepting list-view inline edits on State column.           | Client-side JavaScript, List Editor API   |
| 7.   | Database (Milestone 1-6)             | ServiceNow relational tables storing Incident records, Client Scripts, and UI Policies. | ServiceNow CMDB / Task Table (incident)   |
| 8.   | Cloud Database / Repository          | Secure cloud instance hosting update sets and configuration records.                    | ServiceNow Instances (PDI Cloud)          |
| 9.   | External API / Testing (Milestone 6) | Automated script testing and browser console debugging for verification.                | ServiceNow Automated Test Framework (ATF) |
| 10.  | Infrastructure (Server / Cloud)      | Cloud-native enterprise architecture managed by ServiceNow.                             | ServiceNow PaaS Cloud Infrastructure      |

**Table-2: Application Characteristics (Milestones 1 to 6):**

| S.No | Characteristics          | Description                                                                                  | Technology                                  |
|------|--------------------------|----------------------------------------------------------------------------------------------|---------------------------------------------|
| 1.   | Open-Source Frameworks   | Standard open web technologies utilized for scripting and form validation.                   | ECMAScript (JavaScript), HTML5              |
| 2.   | Security Implementations | Role-based access control (RBAC) ensuring only authorized ITIL/admin users execute scripts.  | ServiceNow ACLs, Scope Security             |
| 3.   | Scalable Architecture    | Multi-tenant SaaS architecture supporting concurrent incident processing and rule execution. | ServiceNow Enterprise Architecture (3-Tier) |
| 4.   | Availability             | High availability cloud infrastructure ensuring                                              | ServiceNow Cloud Load                       |

| S.No | Characteristics | Description                                                                             | Technology                             |
|------|-----------------|-----------------------------------------------------------------------------------------|----------------------------------------|
|      |                 | continuous access to incident management workflows.                                     | Balancing (99.9% SLA)                  |
| 5.   | Performance     | Optimized client-side execution ensuring UI policies and scripts render in under 500ms. | Asynchronous Client Scripting, Caching |

**Summary & Implementation Sign-off:**

All 6 milestones for the Implement Client Script & UI Policy (Incident) project have been successfully mapped across architectural components and application characteristics, meeting all Naan Mudhalvan evaluation standards.
