

Project Design Phase

Problem – Solution Fit Template

Date	3 October 2026
Team ID	SWTID-2026-1299
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.
- Template:

1. CUSTOMER SEGMENT(S) [CS] Who is your customer? • Incident Management Users, IT Service Desk Agents, ServiceNow Administrators. • Users reporting & resolving IT incidents daily.	6. CUSTOMER CONSTRAINTS [CC] What constraints prevent your customers from taking action? • Time pressure while creating incidents. • Lack of technical knowledge on required form fields. • Direct list-edit loopholes.	5. AVAILABLE SOLUTIONS [AS] Which solutions are available to customers currently? • Manual data validation by IT leads. • Post-submission ticket correction & follow-ups. • Static form configurations.
2. JOBS-TO-BE-DONE / PROBLEMS [J&P] Which jobs-to-be-done or problems do you address? • Ensure fields (like Urgency) are mandatory/visible dynamically (M1 & M2). • Auto-update fields on change (M3). • Validate data before save (M4) & on list edit (M5).	9. PROBLEM ROOT CAUSE [RC] What is the real reason that this problem exists? • Form fields lack dynamic UI Policy rules. • Missing client-side script validation (`g_form` API). • Inline list edits bypass standard form logic.	7. BEHAVIOUR [BE] What does your customer do to address the problem? • Users skip optional fields or enter invalid values. • Users edit records directly from list view to bypass form checks.
3. TRIGGERS [TR] What triggers customers to act? • Incident submission errors or missing urgency. • Real-time field changes on the Incident form. • Inline editing attempt in the Incident list view.	10. YOUR SOLUTION [SL] Write down your current solution proposition: • Implement UI Policy & UI Policy Actions for Urgency. • Implement onChange, onSubmit, and onCellEdit Client Scripts. • Comprehensive testing across all scenarios (M6).	4. EMOTIONS: BEFORE / AFTER [EM] How do customers feel before and after? • Before: Frustrated by invalid data & manual updates. • After: Confident, fast, and assured of high data accuracy.

8. CHANNELS OF BEHAVIOUR [CH]

What channels do customers use?

8.1 ONLINE: ServiceNow Incident Portal, Incident Form (`g\_form` API), Incident List View.

8.2 OFFLINE: IT Service Desk reviews & auditing procedures.
