

Project Design Phase
Proposed Solution Template

Date	3 October 2026
Team ID	SWTID-2026-1299
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In ServiceNow Incident Management, users often submit tickets with missing required fields, inaccurate urgency ratings, or improper values. Additionally, editing records directly via list view bypasses standard form-level rules, leading to data inconsistency and lower SLA tracking efficiency.
2.	Idea / Solution description	Implement UI Policies, UI Policy Actions, and Client Scripts (onChange, onSubmit, and onCellEdit) on the Incident table using the g_form API. This dynamically enforces mandatory/visible/read-only field properties, provides instant user messaging, validates form submissions, and restricts unvalidated inline list edits.
3.	Novelty / Uniqueness	Combines client-side UI policies and multi-event JavaScript controls to achieve 360-degree validation coverage—ensuring field integrity across both individual form views and bulk list views simultaneously without requiring server round-trips.
4.	Social Impact / Customer Satisfaction	Accelerates IT issue resolution, reduces back-and-forth communication between end-users and IT desk agents, boosts user satisfaction, and ensures high organizational data reliability for critical incident management.
5.	Business Model (Revenue Model)	Enterprise ITSM optimization model: Reduces operational costs, minimizes ticket lifecycle resolution time, and maximizes return on investment (ROI) by preventing costly data errors and improving service desk SLA compliance.
6.	Scalability of the Solution	Highly scalable across all ServiceNow ITSM modules (Change, Problem, Service Catalog) and custom applications by reusing structured Client Scripts, UI Policy rules, and script includes across various enterprise processes.
