| Project Name  | Implement Client Script & UI Policy (Incident) |
| Maximum Marks |                                                |

## Project Overview:

Project Name: Implement Client Script & UI Policy (Incident)

Project Description: Implementation of client-side validation using UI Policies, UI Policy Actions, and Client Scripts (onChange, onSubmit, onCellEdit) on the ServiceNow Incident table.

Project Version: v1.0

Testing Period: 15/02/2025 to 28/02/2025

## Testing Scope:

- Testing UI Policy execution and UI Policy Actions (Mandatory, Visible, Read-only on Urgency field).
- Testing Client Scripts execution across onChange, onSubmit, and onCellEdit events on the Incident table.
- Testing field validation rules, error message display (g\_form.addErrorMessage), and inline list editing restrictions.
- Testing User Stories / Requirements: M1 (UI Policy - Mandatory), M2 (UI Policy Action - Urgency), M3 (onChange Client Script), M4 (onSubmit Validation), M5 (onCellEdit Restriction), and M6 (End-to-End Testing)

## Testing Environment:

- URL/Location: ServiceNow Developer Personal Developer Instance (PDI) - <https://devXXXXX.service-now.com>
- Credentials (if required): admin / [Protected Password]

## Test Cases:

| Test Case ID | Test Scenario                                                | Test Steps             | Expected Result                             | Actual Result                               | Pass/Fail |
|--------------|--------------------------------------------------------------|------------------------|---------------------------------------------|---------------------------------------------|-----------|
| TC-001       | Verify UI Policy makes Urgency field mandatory when Incident | 1. Open Incident form. | Urgency field becomes mandatory dynamically | Urgency field became mandatory as expected. | Pass      |

| Test Case ID | Test Scenario                                                                    | Test Steps                                                                                                | Expected Result                                                            | Actual Result                                      | Pass/Fail |
|--------------|----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|----------------------------------------------------|-----------|
|              | State is Active.                                                                 | 2. Set State to Active.<br><br>3. Observe Urgency field.                                                  | with red asterisk.                                                         |                                                    |           |
| TC-002       | Verify onChange Client Script triggers when Category is changed.                 | 1. Select Category 'Hardware'.<br><br>2. Observe Subcategory options.                                     | Subcategory options update dynamically based on chosen Category.           | Subcategory updated correctly in real-time.        | Pass      |
| TC-003       | Verify onSubmit Client Script blocks submission when Short Description is empty. | 1. Clear Short Description.<br><br>2. Click Submit button.                                                | Submission is blocked; top error message alerts user to enter description. | Form submission blocked and error alert displayed. | Pass      |
| TC-004       | Verify onCellEdit Client Script prevents invalid inline list editing.            | 1. Open Incident List View.<br><br>2. Double-click State column to change to Resolved without Work Notes. | Inline edit is rejected; alert pops up requesting form entry.              | Inline edit prevented with warning popup.          | Pass      |

| Test Case ID | Test Scenario                                               | Test Steps                                                        | Expected Result                                      | Actual Result                             | Pass/Fail |
|--------------|-------------------------------------------------------------|-------------------------------------------------------------------|------------------------------------------------------|-------------------------------------------|-----------|
| TC-005       | Verify UI Policy Action hides work notes when State is New. | 1. Create new Incident.<br><br>2. Check visibility of Work Notes. | Work Notes field remains hidden until State changes. | Field hidden as expected for State = New. | Pass      |

#### Bug Tracking:

| Bug ID | Bug Description                                                           | Steps to reproduce                                                                                | Severity | Status | Additional feedback                                   |
|--------|---------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|----------|--------|-------------------------------------------------------|
| BG-001 | UI Policy failed to make Urgency read-only after incident resolution.     | 1. Open resolved incident.<br><br>2. Try changing Urgency dropdown.<br><br>3. Value was editable. | Medium   | Closed | Added Reverse if False check in UI Policy properties. |
| BG-002 | onSubmit script error when Short Description contains special characters. | 1. Type special characters in Short Description.<br><br>2. Click Submit.                          |          |        |                                                       |

**Sign-off:**

- Tester Name: Naan Mudhalvan Student / Project Lead
- Date: 28/02/2025

**Notes:**

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
