

Project name:Implement Client Script & UI Policy (Incident)

Milestone 2: Create UI Policy Action – Urgency

Problem Statement:

In ServiceNow, create a **UI Policy Action** for the **High Impact Control** UI Policy created earlier.

Configure the UI Policy Action so that when the **Impact** field on an Incident is set to **High**, the **Urgency** field becomes **read-only** while remaining visible on the form.

To achieve this, open the **High Impact Control** UI Policy, navigate to the **UI Policy Actions** related list, and create a new action for the **Urgency** field.

Set **Read-only** to **true** and leave the **Visible** option unchanged. Save the action and verify the configuration by opening an Incident, setting Impact to **High**, and confirming that the Urgency field cannot be modified.

Also verify that the field returns to its normal behavior when the Impact value is changed.
