

Project name:Implement Client Script & UI Policy (Incident)

Milestone 2: Create UI Policy Action – Urgency

Solution

1. I opened the **High Impact Control** UI Policy that I had created earlier in ServiceNow.
2. I scrolled down to the **UI Policy Actions** related list, where I could define the specific behavior of fields when the UI Policy condition is satisfied.
3. I clicked the **New** button to create a new UI Policy Action.
4. In the **Field name** field, I selected **Urgency**, as this was the field that needed to be controlled when the Incident had a high impact.
5. I set the **Read-only** option to **true**. This ensures that the Urgency field can be viewed by users but cannot be modified when the UI Policy condition is met.
6. I left the **Visible** option unchanged so that the Urgency field continues to remain visible on the Incident form.
7. After entering all the required details, I clicked **Submit** to save the UI Policy Action.
8. To verify the configuration, I opened an **Incident** record and set the **Impact** field to **High**.
9. I checked the **Urgency** field and confirmed that it had become **read-only**, which means the field was visible but could not be edited.
10. I then changed the **Impact** value to a different option and verified that the Urgency field returned to its normal editable behavior.
11. I have **attached the relevant screenshots** showing the UI Policy Action configuration and the verification of the Urgency field for reference and proof of completion.

Screen shot:

The screenshot shows the 'UI Policy Action - New Record' page in ServiceNow. The browser address bar shows the URL: `dev435320.service-now.com/now/nav/ui/classic/params/target/sys_ui_policy_action.do%3Fsys_id%3D-1%26sys_is_list%3Dtrue%26sys_is_related_list%3Dtrue%26sys_target%3Dsys_ui_policy_action...`. The page title is 'UI Policy Action - New Record'. Below the title, there is a blue banner with the text: 'UI policy actions specify exactly what actions to take on a specified field. The conditions specified in the UI policy determine when these actions are triggered. [More info](#)'. The main configuration area includes: 'UI policy' set to 'High Impact Control', 'Table' set to 'Incident [Incident]', and '* Field name' set to 'Urgency'. On the right, there are settings for 'Application' (Global), 'Mandatory' (Leave alone), 'Visible' (Leave alone), and 'Read only' (Leave alone). There is also a 'Clear the field value' checkbox. A 'Submit' button is located at the bottom left of the configuration area. The bottom of the screen shows a Windows taskbar with the date and time: 01:59 PM, 30-09-2025.

Result

The **UI Policy Action** was successfully created and configured. When the **Impact** of an Incident is set to **High**, the **Urgency** field becomes read-only while remaining visible on the form. The attached screenshots provide evidence of the configuration and successful verification.
