

Project name:Implement Client Script & UI Policy (Incident)

Milestone 1 :Create UI Policy on incident

Problem Statement:

Create a UI Policy in ServiceNow to control the Assignment Group field for high-impact incidents.

As an administrator, configure a UI Policy on the **Incident** table so that whenever the **Impact** of an Incident is set to **1 – High**, the **Assignment group** field becomes **mandatory**. The policy should be active and should automatically reverse the field behavior when the condition is no longer satisfied.

Requirements:

- Create a UI Policy named **High Impact Control**.
- Apply it to the **Incident** table.
- Set the policy to **Active**.
- Condition: **Impact is 1 – High**.
- Create a UI Policy Action for **Assignment group**.
- Make **Assignment group mandatory** when the condition is true.
- Enable **Reverse if false** so the mandatory behavior is removed when Impact is changed from High.
- Submit and save the UI Policy.
