

Project Name: Create OnCellEdit Client Script

Milestone: 5

Solution

To prevent users from changing the **State** field directly from the Incident list view, an **onCellEdit Client Script** can be created in ServiceNow. This script will run whenever a user attempts to edit the State field directly from the list.

Steps

Navigate to **System UI → Client Scripts** and click **New**. Create the Client Script with the following details:

- **Name:** Prevent state change via list edit
- **Table:** Incident
- **Type:** onCellEdit
- **Field name:** State
- **Active:** True

Enter the following script:

```
function onCellEdit(sysIDs, table, oldValues,
newValue, callback) {

    alert('State cannot be updated using list
editing. Please open the Incident.');
```

```
    callback(false);
}
```

The `onCellEdit` function is triggered when a user tries to edit a field directly from a list. In this case, the script displays an alert message informing the user that the **State** cannot be changed through list editing.

The statement:

```
callback(false);
```

prevents the change from being saved.

After entering the required details and script, click **Submit** to save the Client Script.

Result

When a user attempts to change the **State** directly from the Incident list, the system displays a warning message and blocks the update. The user must open the Incident record to make the State change. This helps prevent accidental or unauthorized State updates.

Available next action: Create a downloadable DOCX file here in this chat containing the plan and action items above

The screenshot shows the ServiceNow 'Catalog Client Scripts - New Record' configuration page. The form includes the following fields and settings:

- Name:** Prevent state change via list edit
- Applies to:** A Catalog Item
- Active:** ☒
- UI Type:** Desktop
- Application:** Global
- Type:** onChange
- Catalog Item:** (empty search field)
- Variable name:** (empty dropdown)
- Applies on a Catalog Item view:** ☒
- Applies on Requested Items:** ☐
- Applies on Catalog Tasks:** ☐
- Applies on Target Record:** ☐

The script editor contains the following code:

```
1 function onChange(control, oldValue, newValue, isLoading) {  
5  
6 //Type appropriate comment here, and begin script below  
7 function onCellEdit(sysIDs, table, oldValues, newValue, callback) {  
8  
9 alert('State cannot be updated using list editing. Please open the Incident.');
```
