

Project name:Implement Client Script & UI Policy (Incident)

Milestone 6 : Testing the configuration

Problem Statement

Test the Incident form to verify that the configured UI Policy and Client Script work correctly for high-impact Incidents.

Create a new Incident and set the **Impact** field to **1 – High**. Leave the **Assigned To** field empty and attempt to submit the Incident.

The system should prevent the Incident from being saved because **Assigned To** is required for high-impact Incidents. An appropriate error message should be displayed indicating that the **Assigned To** field cannot be left empty.

Also verify that the configured **UI Policy actions and Client Script behaviors**, such as field restrictions and automatic urgency updates, are functioning correctly when the Impact is set to High.
