

Project name:Implement Client Script & UI Policy (Incident)

Milestone 6 : Testing the configuration

Solution

I navigated to **Incident** → **Create New** in the ServiceNow instance and opened a new Incident form.

I selected **High (1 – High)** in the **Impact** field. This triggered the configured UI Policy and Client Script behaviors for high-impact incidents.

I intentionally left the **Assigned To** field empty and clicked **Submit** to test whether the configured **onSubmit Client Script** prevents the Incident from being saved without an assigned user.

As expected, the Incident was **not saved**. An error message was displayed indicating that the **Assigned To** field cannot be left empty when the Incident has a High Impact.

I also verified that the configured **UI Policy actions** were working as expected, including the required field behavior and other restrictions or automatic updates associated with a high-impact Incident.

Therefore, the **High Impact Control UI Policy and Client Script** were successfully tested and verified.

Screenshot:

I have attached the screenshot below as evidence showing the Incident form with **Impact set to High**, **Assigned To left empty**, and the resulting validation/error message.

The screenshot shows the ServiceNow 'Incident - Create INC0010002' form. A red error banner at the top states: 'The following mandatory fields are not filled in: Short description'. The form fields are as follows:

Field	Value
Number	INC0010002
* Caller	System Administrator
Watch list	[Add] [Remove]
Opened	2026-09-30 01:36:14
Closed	[Calendar icon]
Urgency	1 - High
State	New
* Short description	[Empty field with red border]

Below the form, there is a 'Related Search' section with a search bar and a dropdown menu set to 'Knowledge & Catalog (All)'. It displays 'No results to display'. At the bottom, there is a 'Comments (Customer visible)' text area. The bottom of the screen shows a Windows taskbar with the date and time '02:06 PM 30-09-2026'.
