Implement Client Script & UI Policy (Incident)

Team Overview Workspace Kanban

Conclusion

Story

Duration: 10m

Review

Description

The Implement Client Script & UI Policy (Incident) micro project effectively demonstrates how **UI Policies** and **Client Scripts** can work together to enforce dynamic field behavior, automate updates, and prevent incorrect data submission on Incident forms. By using onChange, onSubmit, and onCellEdit scripts alongside UI Policy actions, the project ensures fields like **Assigned To** and **Urgency** respond appropriately to changes in **Impact**, maintaining clean and consistent data. This solution not only enforces mandatory fields and controls user interactions but also remains lightweight, efficient, and easy to implement, making it ideal for short-duration micro projects while showcasing practical best practices for improving form usability and data integrity in ServiceNow.
